

PWMs with the highest Random Forest feature importance (mono+di ArChIPelago, human test set)

top-4 monoPWMs and top-2 diPWMs per TF; logos in bits, each on its own length; diPWMs shown as the mononucleotide marginal;
rc = reverse complement of the file, oriented as monoPWM 1; Δ = gain of ArChIPelago over the best single monoPWM

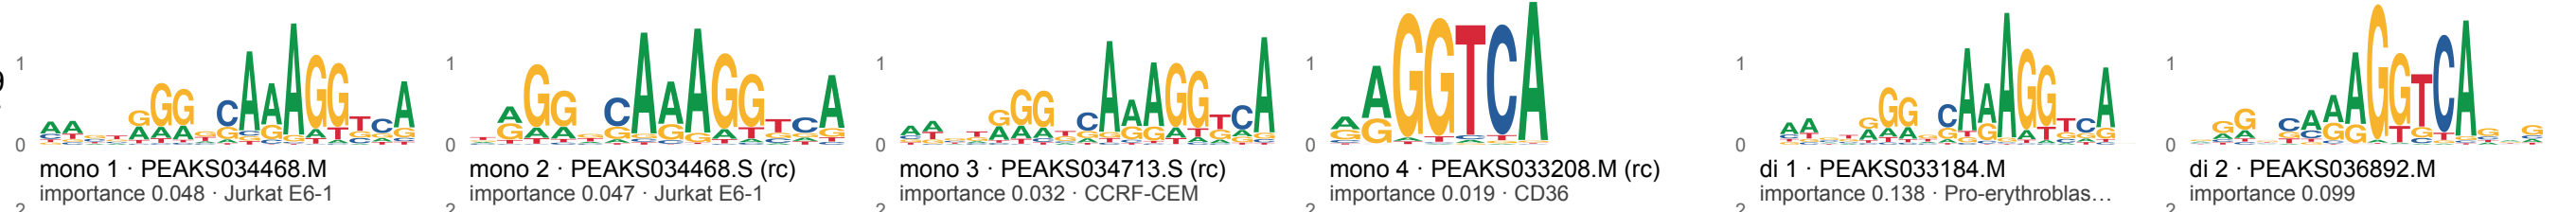

A

E2F4
ΔauROC +0.091
ΔauPRC +0.058

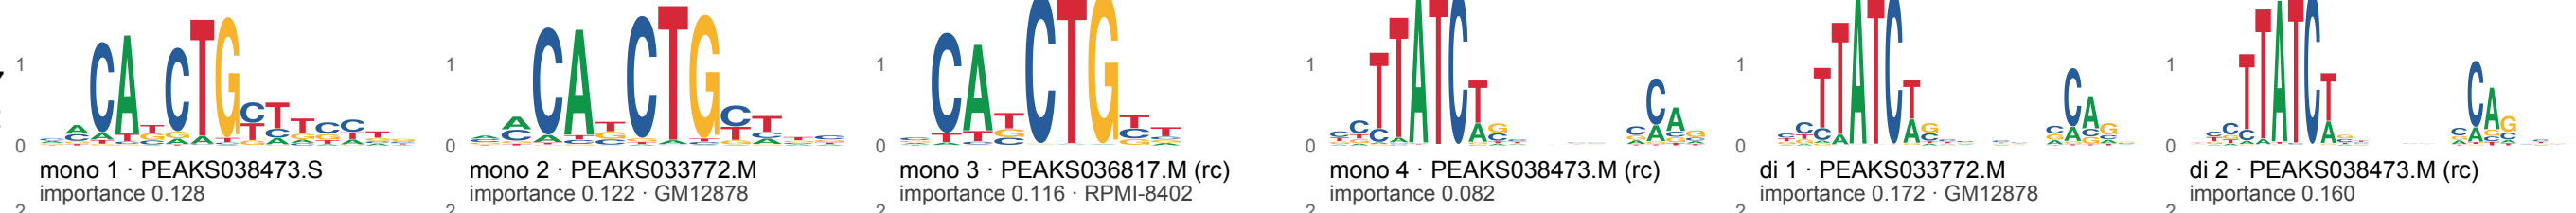

B

RXRA
ΔauROC +0.079
ΔauPRC +0.007

C

TAL1
ΔauROC +0.047
ΔauPRC +0.032

D

TFE2
ΔauROC +0.045
ΔauPRC +0.026
